

As President of the Albany Amateur Radio Association, I would like to voice my utmost disgust with this proposed use of our (the public's) radio spectrum.

It generates interference that will render our communicating frequencies utterly useless. I personally spent years fighting interference caused by USSR "Jammers", especially their "Woodpecker", and now this "Bulletproof" jamming system actually being proposed is just incredulous!!

Amateur radio has provided our country with ready-trained operators for the military in times of war, and, we can proudly say that when all systems fail, as with 9/11, last week's blackout, and other disasters, we are always there! We provide the public with a communications system that has never failed and never cost the taxpayer a penny. BPL will be the death of Amateur radio as we know it today, and it's public interest contribution
